TURN YOUR OLD COMPUTER INTO AN ARCADE MACHINE

Relive thousands of your favorite arcade games with your PC and an arcade emulator. While there are many arcade emulators out there the most popular one is MAME. MAME stands for Multiple Arcade Machine Emulator. When used in conjunction with an arcade game's data files (ROMs), MAME will more or less faithfully reproduce that game on a PC. MAME can currently emulate over 3000 unique (and over 5400 in total) classic arcade video games from the three decades of video games - '70s, '80s and '90s, and even some from the current millennium. The ROM images that MAME utilizes are "dumped" from arcade games' original circuit-board ROM chips. MAME becomes the "hardware" for the games, taking the place of their original CPUs and support chips. Therefore, these games are NOT simulations, but the actual, original games that appeared in arcades. MAME can be downloaded for free at www.mame.net

CompuXparts Arcade

Complete Arcade Machine

Complete Arcade system custom built by CompuXparts. Includes the Ultimate Arcade II cabinet featuring a two-piece design, slide-out keyboard drawer, coin acceptor and a backlit marquee. \$599.99

Construction Plans (\$39.99)

The step-by-step construction plans contain several illustrations and instructions for each step. These detailed plans make building your very own arcade cabinet quick and simple, even for the novice wood worker!

Cutout Templates (\$55.99)

Save time and money by using full-size cutouts for the cabinet panels. No measuring required and no costly mistakes. Just glue, tape, or trace the templates onto the wood material and cut.

Please visit CompuXparts for more information. Some products are special order and can take up to 5 weeks for delivery. CompuXparts does not offer or sell arcade roms. The MAME arcade emulator is not included with any of our arcade machines. MAME can be downloaded for free at www.mame.net
